

Customized bearing solutions to enhance your products

Bearings are sacrificial parts, but when extreme service environments cause them to fail prematurely, it is a negative experience for your customers.

EDT designs and manufactures bearings to run longer in tough locations. We would be pleased to partner with you to optimize bearings on your equipment. These might be standard parts or a "low maintenance upgrade" package that customers can select.

We can work with you for:

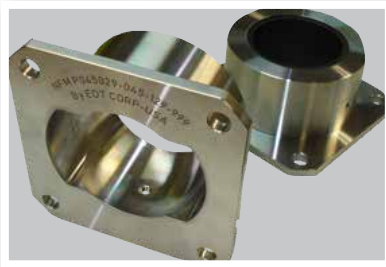

- **Volume and annual pricing**
- **Blanket orders with releases**
- **Just In Time delivery**
- **Customized parts**
- **Custom-marked parts**
- **Proprietary designed parts**
- **Low minimum orders**
- **Flexible lead times**

If your business includes spare parts, we can brand components for easy identification.

EDT can work with you to develop:

Private labeled parts
